

RADIO SYSTEM

Morning Radio check was moved from 0700 hours to 0730 hours to allow time for crews to secure their equipment and communicate any problems to the oncoming shift.

Radio check is now done on all front line radios to include every portable radio that they have onboard.

Individual ID's were added for each and every radio on the Department's system for the application of the "man down" or "mayday" feature to our radio system.

Our radio system is being moved to a tower in the center of town instead of the old tower that was located on the west side of the Wabash River, this virtually eliminates the "dead spots" in our coverage area and greatly increases firefighter safety.

State System radios are being installed in all Command vehicles.
